Compatible Drivers & Applications

NIAGARA COMMUNITY HAS A DRIVER FOR EVERY NEED

Niagara Framework® offers an open platform that developers all over the world are utilizing to create solutions to real-world problems. This fast growing collection of drivers is unmatched in the industry. In many cases, the right driver for your integration work is available off-the-shelf from one of our development partners. This document strives to list all drivers available for purchase or, in some cases, for free at the current time. Note that Tridium has not tested all listed drivers and does not certify conformance. We have compiled this list as a convenience to our customers and, as new offerings are introduced by Niagara Community developers all the time, it may not be comprehensive. If you don't find the driver or application you are looking for on this list, the openness of the Niagara environment means you can relatively easily develop the solution you need. Moreover, Tridium 's developer support team and others in the Niagara Community are here to help.
